

SolarWinds can help ensure security throughout your IT infrastructure

Help keep your environment safe by combining **performance** and **security data**

Security isn't something that can be done in a silo. It takes knowledge of your entire infrastructure and the right assets to secure them properly. SolarWinds can help manage threats by providing powerful and easy-to-use software for performance management and integrated security across all platforms.

Monitor Your Endpoints

Patch Manager can help ensure servers and workstations stay up to date with the latest software patches and identifies where you might have a weakness on your endpoints.

solarwinds.com/patch

Serv-U Managed File Transfer Server is built so you can safely transfer files across your organization with ad-hoc or scheduled transfers (with audit trails) —and tracks security and compliance requirements. solarwinds.com/smft

IP Control Bundle combines IP Address Manager and User Device Tracker to deliver integrated IP and end-point management to help network engineers and system administrators eliminate IP conflicts and improve network reliability and efficiency. solarwinds.com/ip-control-bundle

Monitor Your Applications and Database

Server & Application Monitor monitors servers and applications to help ensure no service degradation has occurred. You can also use the performance data collected from applications to spot security attacks and breaches.

solarwinds.com/sam

Database Performance Analyzer uses response time and forensic trending across days, months, or years, and features baselines and reports to help identify performance and security anomalies in databases such as Microsoft® SQL, Oracle®, DB2®, and more. solarwinds.com/dpa

Monitor Your Systems

Virtualization Manager can help identify the root cause of problems typically in minutes by quickly drilling into the app, server, virtual, and storage layers to troubleshoot performance issues.

solarwinds.com/vman

Storage Resource Monitor can give you visibility into storage utilization and performance problems and is expandable to see the VMs and applications that are dependent on any storage element.

solarwinds.com/srm

Access Rights Manager helps centrally provision, deprovision, manage and audit user access rights to systems, data, and files while helping to protect against security breaches and demonstrate compliance with regulatory requirements.

solarwinds.com/arm

Monitor Your Network

Network Configuration Manager can help ensure network configurations consistently demonstrate compliance with industry and internal best practices, as well as industry regulations and compliance requirements. solarwinds.com/ncm

NetFlow Traffic Analyzer can show you how clients are behaving and helps you find abnormal behavior.

solarwinds.com/netflow

Bring It All Together

Security Event Manager, formerly Log & Event Manager, is built to combine data from all servers, network devices, applications, and security appliances in your infrastructure and helps identify critical events. By linking a real-time event correlation engine, event normalization, and out-of-the-box rules and reports in a simple to use virtual appliance, our solution gives you seamless IT security in your environment. solarwinds.com/sem

Threat Monitor™ can correlate logs in near real time and analyzes them against situational awareness sources to identify threats. Centralized, cloud-based security monitoring with continuously updated threat data, automated responses, and integrated compliance. solarwinds.com/threat-monitor
